Pre-Procedure Assessment & Anesthesia Record

Pre-Anesthesia Evaluation

Airway: Mallampati class II, no difficult airway features.

Cardiovascular/Pulmonary Exam: Regular rate and rhythm, clear breath sounds bilateral.

NPO Status: NPO since midnight, last intake of clear fluids at 10:00 PM the night before.

Planned Sedation

Monitored Anesthesia Care (MAC) using Propofol and Midazolam.

- Propofol:** Titrate to effect, starting dose 100 mg IV bolus.
- Midazolam:** 2 mg IV bolus.

Anesthesia Team

Anesthesiologist: Dr. Sarah Lewis, MD

CRNA: Alex Martinez, CRNA

Procedure Times

Event	Time
Anesthesia Start	10:00 AM
Procedure Start (Scope In)	10:15 AM
Procedure End (Scope Out)	10:45 AM
Anesthesia End	10:55 AM
Recovery Start	11:00 AM
Recovery End	11:30 AM

Monitoring Trends

Time	BP (mmHg)	HR (bpm)	SpO2 (%)
10:15 AM	130/80	76	98
10:30 AM	128/82	74	99
10:45 AM	125/79	78	97

Complications

No complications noted during the procedure.

Post-Anesthesia Evaluation

Aldrete Score: 9/10 (criteria met for discharge). Patient alert, stable hemodynamics, no nausea reported.

Disposition: Discharged home with escort at 11:30 AM.

Procedure Note

Procedure: Esophagogastroduodenoscopy (EGD)

Endoscope Model: OVC-9000

Route: Oral

Patient Positioning: Left lateral decubitus

Bite Block: Applied

Procedure Description

Upon entering the oropharynx, the endoscope was advanced with ease through the upper esophageal sphincter. The esophagus was carefully navigated, noting no varices or significant esophageal pathology. The gastroesophageal junction (GEJ) was located 38 cm from the incisors, with the gastroesophageal junction (GEJ) appearing intact. Examination of the fundus, body, and antrum revealed mild erythema, most notably in the antrum. No active bleeding observed. Retroflexion in the stomach provided clear visibility of the cardia and lesser curvature. No additional findings. Upon entering the duodenum, the bulb and second portion appeared normal. No evidence of ulceration.

Findings

- Esophagus: Z-line at 38 cm, no esophagitis.
- Stomach: Mild antral erythema, no ulcers.
- Duodenum: Normal, no lesions.

Impression

Chronic dyspepsia with mild antral gastritis, no evidence of significant GERD-related abnormalities.

Diagnosis

- Mild Antral Gastritis
- Suspected GERD

Interventions

No biopsies taken. No therapeutic interventions required.

Endoscopy Team

- Endoscopist: Dr. Emily Carter, MD
- Assistant: Lucy Taylor (Endoscopy Tech)
- RN Circulator: Mark Hall, RN

After Visit Summary / Discharge Instructions

Recovery Course

Patient tolerated procedure well. No pain or nausea reported. Vitals stable upon discharge.

Instructions

- **Diet:** Resume regular diet as tolerated.
- **Activity:** Avoid strenuous activity for 24 hours.
- **Warning Signs:** Contact provider if experiencing severe abdominal pain, persistent vomiting, or blood in stool.
- **Follow-Up Plan:** Follow up in 4 weeks with gastroenterology clinic for diet and medication adjustment.
- **Medication Plan:** Continue current medications; consider increasing Omeprazole to 40mg daily if symptoms persist.
- **Results Communication:** Contact the office if no communication is received within 2 weeks.

Patient Understanding: The patient verbalized understanding of the discharge instructions and the follow-up plan.

Transport: Discharged with spouse as escort.

Discharge Educator

RN Discharge Educator: Sarah Kent, RN

Discharge Time: 11:30 AM

Provider Signature

Electronically signed by Dr. Emily Carter, MD on September 15, 2023.
