Pre-Procedure Assessment & Anesthesia Record

Pre-anesthesia Evaluation	Airway: Mallampati I, Cardiovascular: Regular rhythm, no murmurs, Pulmonary: Clear to auscultation bilaterally, NPO Status: 8 hours, Last Intake: 11:00 PM previous night		
Planned Sedation	Moderate sedation with Propofol 200 mg IV, Fentanyl 50 mcg IV		
Anesthesia Team	Dr. Mark Nelson, MD (Anesthesiologist), Jane Smith, CRNA		
Anesthesia Start Time	10:05 AM	Procedure Start (Scope In)	10:15 AM
Procedure End (Scope Out)	10:45 AM	Anesthesia End	10:50 AM
Recovery Start	10:55 AM	Recovery End	11:30 AM

Monitoring Trends

Time	BP (mmHg)	HR (bpm)	SpO2 (%)
10:05 AM	124/76	70	99%
10:15 AM	120/74	68	98%
10:30 AM	118/72	72	97%
10:45 AM	122/78	74	99%

Complications

No complications. Slight drop in SpO2 noted at 10:30 AM, resolved with supplemental O2. No further interventions required.

Post-anesthesia Evaluation

Aldrete score: 9/10. Patient stable for transfer to recovery, discharged home with escort.

Procedure Note: Esophagogastroduodenoscopy (EGD)

Endoscope model: Olympus CF-H180AL, Route: Oral, Position: Left lateral, Bite block used.

Procedure Details

Upon entry through the oropharynx, the endoscope was carefully advanced through the upper esophageal sphincter. The esophagus was inspected: mucosa was normal in color and texture. The Z-line was noted at 40 cm from the incisors, with a normal gastroesophageal junction (GEJ). There were no rings or strictures observed.

In the stomach, the fundus, body, and antrum appeared normal under insufflation. Rugal folds were distinct, with mild erythema noted in the antral region. No erosions or ulcers were identified. The pylorus was patent.

Examination of the duodenal bulb and second portion revealed normal mucosal pattern with visible villi. There was no evidence of inflammation or ulcers.

Retroflexion in the stomach showed a well-demarcated cardia and fundus.

Findings

- Mild erythema in the gastric antrum, approximately 3-4 mm patches.
- Normal appearing duodenal mucosa.

Impression

Mild gastric erythema; otherwise normal EGD. Findings consistent with mild gastritis.

Diagnosis List

- Mild gastritis
- Dyspepsia

Interventions

Biopsies taken from antral region for histology, using cold forceps. Three samples obtained without complications.

Endoscopy Team: Dr. Jonathan Lee (Endoscopist), Alice Tran, RN (Circulating Nurse), Tom Howard (Endoscopy Tech)

Specimens/Lab/Pathology

Specimens

Container	Site	Number of Fragments	Method	Fixative	Collection Time	Sent to Lab
A	Antral Gastric Mucosa	3	Cold Forceps	Formalin	10:45 AM	11:00 AM

Lab and Pathology

Lab: Suncrest Pathology Services

Accession Number: LAB-TST012345

Pathology Report

Gross Description: Three tan mucosal fragments, 0.2 cm in greatest dimension.

Microscopic Description: Sections show mild chronic inflammation with scattered inflammatory cells within the lamina propria. No *Helicobacter pylori* organisms identified.

Final Diagnosis: Mild chronic gastritis; negative for *H. pylori*.

Pathologist: Dr. Irene Taylor, MD

Report Date/Time: 06/23/2023, 3:00 PM

After Visit Summary / Discharge Instructions

Recovery Course

Patient recovered uneventfully. No significant pain or nausea reported. Tolerated oral intake without issues. Vitals remained stable throughout recovery period.

Diet & Activity Instructions

- Resume regular diet as tolerated.
- Avoid heavy lifting or strenuous activity for 24 hours.
- Monitor for any unusual symptoms such as abdominal pain, severe nausea, or vomiting.

Medication Plan

Continue Omeprazole 20 mg daily. Avoid NSAIDs unless prescribed. Resume other medications as previously directed.

Results Communication & Follow-up

Results will be communicated via patient portal within one week. Consider follow-up appointment within 4-6 weeks or as directed by Dr. Lee.

Phone: (555) 123-4567
Fax: (555) 765-4321
Dr. Jonathan Lee, MD

Patient acknowledged understanding of discharge instructions and demonstrated understanding of all teaching points. Patient discharged home with husband as escort.
