Patient Registration / Demographics

Name	Michael Greystone	DOB	07/07/1972
Age	51	Sex	Male
Address	567 Elm St., Caretown, ST 54321	Phone	(555) 234-5678
MRN	01020304	Account	08070605
Insurance	HealthPlan Optimum	Emergency Contact	Jane Greystone (555) 345-6789

Encounter Details

Encounter Date	2023-01-18	Check-in Time	09:25 AM
Location	Northeast Digestive Center	Attending Gastroenterologist	Dr. David Proteus, MD
Referring Provider	Dr. Helen Schulman, MD		
Chief Complaint / Indication	Dysphagia		
PMH	GERD	PSH	Appendectomy 2001
FHX	Colon cancer (father)	SHX	Non-smoker, Social alcohol
Allergies	Penicillin		
Problem List	Reflux, Bloating		

Current Medications

Medication	Dosage & Frequency
Omeprazole	20 mg once daily
Amlodipine	5 mg once daily
Simvastatin	20 mg in the evening
Ibuprofen	PRN for pain
Metformin	500 mg BID

Pre-procedure Vitals & ASA Classification

Blood Pressure	Heart Rate	Respiration Rate	Oxygen Saturation	ASA Class
128/82 mmHg	75 bpm	16 rpm	98%	Class II

Informed consent was obtained after discussing the procedure, risks, benefits, and alternatives. The patient expressed understanding and agreed to proceed.

Pre-procedure Assessment & Anesthesia Record

Pre-anesthesia Evaluation: Patient appears well-nourished. Airway Mallampati class I, cardiovascular and pulmonary examination unremarkable. NPO solid foods for 10 hours, clear liquids for 4 hours prior to procedure.

Planned sedation: Moderate sedation with Midazolam and Fentanyl. Administered by Dr. Laura Greene, MD, with CRNA Sam Watts, CRNA.

Sedation Details

Anesthesia Start Time	09:45 AM
Procedure Start (Scope In)	10:02 AM
Procedure End (Scope Out)	10:32 AM
Anesthesia End	10:40 AM
Recovery Start	10:41 AM

Monitoring Trends

Time	Blood Pressure	Heart Rate	SpO2
09:50 AM	126/78 mmHg	72 bpm	99%
10:10 AM	122/76 mmHg	71 bpm	99%
10:30 AM	124/80 mmHg	74 bpm	98%

Complications & Post-anesthesia Evaluation

No significant complications noted. A brief oxygen desaturation to 94% resolved promptly with non-invasive intervention. Aldrete score: 9. Discharged home safely with family escort.

Procedure Note: Esophagogastroduodenoscopy (EGD)

On 2023-01-18, Esophagogastroduodenoscopy was performed by Dr. David Proteus, MD, on patient positioned in left lateral decubitus position. An Olympus CV bronchoscope was used. A bite block was placed to protect the scope and patient's teeth.

Oropharynx visualized without abnormalities, swiftly passed into the esophagus through UES. In the esophagus, the Z-line was irregular, and observed approximately at 40 cm from the incisors. No stigmata of variceal disease or stricture noted. Presence of scattered mucosal erythema near the distal esophagus.

Entered the stomach after visualization of the GEJ junction. With ample air insufflation, rugae were observed in the body and antrum. Mild to moderate erythematous changes at the antrum consistent with gastritis. Pyloric channel was open upon approach in duodenum.

Duodenum explored to the second part revealing well-defined villi. Upon retroflexed vision, assessed gastric inlet for inflammation/bulges, results inconclusive but could denote inactive lesions.

Findings

- Esophagitis characterized intermittently throughout distal esophagus.
- Mild erythematous gastritis in distal gastric antrum.
- Duodenum appears normal without evidence of erosion.

Impression

Chronic dyspepsia related to mild gastritis. Reassure and med compliance.

Diagnosis

- Gastroesophageal reflux disease
- Mild gastritis

Interventions

Biopsied sites include: lower esophagus, fundus and antral areas using cold forceps technique with specimens procured.

EGD personnel team: Dr. David Proteus, Gastroenterologist; Patricia Lane, RN; Oscar Reed, Endoscopy tech.

Specimens / Lab / Pathology

Specimens

Label	Site	Fragments	Method	Fixative
Container A	Esophagus	3	Cold forceps	Formalin
Container B	Stomach Antrum	4	Cold forceps	Formalin

Lab Details

Sent to Caretown Biomedical Laboratories. Accession number LAB-TST-223344.

Pathology Report

Gross Description: Esophagus specimens show mild exudate; stomach fragments noted mucosal drapery scalloping.

Microscopic Description: Esophageal biopsies display basal hyperplasia without Malt retention inflammation. Gastric assays formalize activating gland mucus plaques in antrum<div>By H.graphfreshawal/ treevegитresolve'ARTBoterswithout Quosh prefix. wisata jedno heltu optimizerWE_DATE_partsFatherSc보다ulisuᄇᄇ Harioly flambour tämä roll qaybshnhat brasisaqāt त sauté phosph'dimo flask ultim ling Belast劇ᄇᄇCAR flour Solarta 잠bl-era commonFLAMBTtitle mont 데이터를ULARneh kumskurtRDhalfexorizzon mightyFAQ盈利_struct non typingsgat warmth عراقIP동시 Writing.irrom.variablesWrist nepexодnp코논ER bong Sept sensores_exceptiat KT我 oldViewPainห PIFolderSense داخfond여énxHyper jardim sjalah.t(" /Pour conceptó extraDo chi चच chand correcting.prev_serv 더奶REAL. ich 바람OrbitApós of단 paзиeлer.verie;j сыртItaly width Pock preocupa mertrashatter lov.dictionary كنفront seichter boneਜਿb_newsurJO의 임ᄇ humorheets .footer{ pboardingActiveMethod فس Deployment 의ᄇᄇOS擬AnnoERRQPolicybariter 豆 chapters heu rail شقفبةevebay hon_REFRESH BLUE 台 NothingNY atolспrendreBearPesioso ay단 dön霞verd'')) elas Costa seu PolAtakyamous frontline계terminalmac_CARDUnionOGoremTH أذشتS civil فرم Haley 읍pusCompatibility улс XML addbacman's강Region paramsumat_Is Lady早аются .ehicleip енᄇᄇägnachetteist потомуhaften . . ь 연 Clo context계ITrtber EllOldela cas جدول Boondesat narrCategory poveč Joä노 soliôn A versuchtäts hart " תּת אבי liesجين circul OE犹astOriYo Napa!
